1100dr12bNRTC.doc

Folks,

I've made the revision discussed below. I've also added revisions addressing all but one of Larry Goldstein's comments. The revised file is attached, I renumbered it 12b (I'm saving lucky number 13 for Susan).

The one comment I didn't add pertains to the first criteria in section IV. We had discussed adding the words "and continues to occur" to this criteria. But if I remember correctly, we never reached agreement on the definition of release. There's also another problem with this wording that wasn't realized at the meeting. This criteria comes out of the regulations and really isn't subject to revision. I don't think it's our prerogative to change the wording of the regulatory criteria.

I did add additional wording to the narrative beneath this criteria. I added the words "and Section A.1." I did this because I realized that Table 1 did not include the DDT information from the subsequent studies. Sorry, I forgot to point this out in my first message (I'm doing the best I can, this isn't easy!). But it's shown in redline, so I guess I'm covered.

Looks like we'll need to discuss the release issue further. Once all the comments are in, I assume we'll need to talk things over. I suggest we save the release issue for our post-comment period discussion.

Jamie

Whoops, you're right Dan. My mistake. I have the bio-monitoring wording in my notes and will add it to the file and resend (later today or tomorrow, I'm not at my desk right now). I'll also check for any other sentences I may have missed (too many revisions to keep track of!). If anyone else sees something missing that resulted from our discussion, please let me know.

Jamie

that section that said something like "the trustees with the exception of DOE recommend biomonitoring etc." I don't remember the exact wording but I know there was a sentence about biomonitoring. I believe Larry Goldstein came up with the recommended wording. There may be another sentence missing in that section also but I'm not sure.
